FOREIGN AND INSULAR.

Medical inspection at fruit ports in Central America discontinued.

With the closure of the season of close quarantine, October 31, the acting assistant surgeons on duty at the consulates at fruit ports of Central America were withdrawn on that date.

CURRENT QUARANTINE MEASURES.

[From the Veröffentlichungen des Kaiserlichen Gesundheitsamtes, Berlin, October 21, 1908.]

CHOLERA.

ALGERIA.—September 30. The extension of cholera in Russia demands that rigorous measures be taken at Algerian ports to prevent importation. Every vessel arriving from Russia, directly or indirectly, shall be subject to medical visit, and if a passenger lands he shall receive a sanitary card for surveillance during a period of five days. Pilots are instructed to avoid contact with a vessel on which a case of any disease whatever has been signaled by the captain. Such a vessel shall not be admitted to port until after medical visit, and if the patient has been attacked with intestinal symptoms the vessel shall not be admitted until after disinfection and the application of the measures prescribed by the regulations. The potable water shall be renewed before admission to free pratique, and no used material shall be emptied in the port, as it has been demonstrated that cholera germs may persist for a long time in sea water.

AUSTRIA.—All arrivals from Russia are subject to five days' observation, their freedom of movement not to be in any way restricted.

EGYPT.—October 5 and 9. Cholera regulations in force against arrivals from Rustchuk, Kherson, Cronstadt, and Sebastopol.

GERMAN EMPIRE.—September 28. The federated governments were notified by circular issued by the imperial department of the interior to enforce the law of June 30 against contagious diseases for all persons arriving from cholera-infected localities of Russia, especially those from St. Petersburg. The law requires telegraphic notification and five days' medical observation. Close observation was required September 24 of all communication with Russia by means of traveling workmen and harvesters.

NORWAY.—October 8. The government of Jenisseisk and European Russia declared cholera infected; of the ports on the White Sea, only Archangel.

RUSSIA.—October 10. City and district of Riga declared cholera-infected; also the governments of Kovno, Livland, and Jelissawetpol.

STRAITS SETTLEMENTS.—September 7. Patalung, on the east coast of the Malayan peninsula, declared cholera-infected.

SWEDEN.—October 12. The government of Livland declared cholera-infected. The islands of Kånsö, near Gothenburg, and Jejan, near Stockholm, are designated as quarantine and observation stations; also Hälsingborg, Västtra, and Håstholmen, in the district of Kostroma; Slite, in Gottland; Arkö, in the district of East Gottland; Juniskären, near Sundsvall, and to October 17 Haron, in the district of Stockholm.

TURKEY.—September 29. Arrivals from the littoral between Batoom and Odessa, both places included, subject to five days' detention with disinfection. Persons from the region named are subject to five days' medical oversight at their places of destination. Pilgrim and other vessels from Russian ports of the Black Sea carrying more than one passenger per every 100 tons net, registered, shall be subject to special measures at the lazaretto of Sinope. Such vessels may, after compliance with said measures, pass the Straits of the Bosphorus and the Dardenelles in quarantine, in order to repair to the lazaretto of Abou-Saad (Jiddah). They are free to take provisions, water, and coal; also to embark other pilgrims, either at the lazaretto of Monastir-Aghzy (Kavak), Klazomena (Smyrna), or Beirut, under strict medical supervision. Emigrant vessels from ports of the Black Sea shall be subject to the same requirements as pilgrim vessels.

PLAGUE.

EGYPT.—October 3 and 6. Plague regulations against arrivals from Beirut and from the Arabian coast of the Red Sea, and from the port of Akaba to the port of Yemen, declared not in force.

TURKEY.—October 6. The strict medical oversight of arrivals from Beirut, previously ordered, discontinued.

ALGERIA.

Deratization at Algiers.

The following is taken from the *Bulletin Bimensuelle*, Algiers, October 16:

October 1 to 15: Rodents taken by the maritime sanitary service, 419; examined by the laboratory of health, 40; result negative. Classification of rats: *Mus norvegicus*, 337; *rattus*, 36; *alexandrinus*, 4; *musculus*, 42.

• BARBADOS.

Report from Bridgetown—Inspection and fumigation of vessels—Case of smallpox from steamship Castillian Prince from Rio de Janeiro.

Acting Assistant Surgeon Urquhart reports, October 24:

Week ended October 24. Vessels inspected, 10; number fumigated, 3; total number of passengers, 23; members of crews, 350.

During the week 1 case of smallpox was removed from the steamship *Castillian Prince*, bound from Rio de Janeiro via Victoria to New Orleans. The case was taken to the quarantine station. The fore-castle and the other living compartments, and saloon were disinfected, and those of the crew who could not show a good scar were vaccinated by the port health officer. No quarantinable diseases were reported for the week for the port or island other than the case of smallpox mentioned.

BRITISH HONDURAS.

Report from Belize, fruit port.

Acting Assistant Surgeon Mengis reports:

Week ended October 29. Present officially estimated population, 10,000. General sanitary condition of this port and the surrounding country during the week, very good.

Bills of health issued to the following-named vessel:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
Oct. 23	Ellis	New Orleans	36	2	4

COSTA RICA.

Reports from Limon, fruit port—Anopheles and Stegomyia calopus present.

Acting Assistant Surgeon Goodman reports:

Week ended October 24. Estimated population, 6,000. General sanitary condition of this port and the surrounding country during the week, good. *Anopheles* and *Stegomyia calopus* are present, but in no great numbers.

Bills of health were issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
Oct. 19	Sarnia	New York	54	77	18
19	Taunton	New Orleans, via Bocas	21	(a)	0
21	Parismina	New Orleans, via Puerto Barrios	84	47	51
23	Chirripo	New York	52	0	0
24	Corinto	New Orleans, via Bocas	24	(b)	0

a 4 for Bocas.

b 9 for Bocas.

Three bills of health for Panamanian ports were viséed; certificates were issued to 33 passengers bound for Colon.

CUBA.

Report from Cienfuegos—Inspection and fumigation of vessels.

Acting Assistant Surgeon Suarez reports, October 26:

Week ended October 24.

Vessels inspected and fumigated	2
Bills of health issued	2
Members of crews inspected	82

No quarantinable disease was reported during the week.

Report from Habana—Inspection and fumigation of vessels—House and water-deposit inspection—Stegomyia calopus present.

Passed Assistant Surgeon Amesse reports, November 2:

Week ended October 31.

Vessels inspected.....	8
Bills of health issued.....	14
Members of crews of outgoing vessels inspected.....	749
Passengers of outgoing vessels inspected.....	406
Vessels fumigated prior to sailing.....	1

The case of yellow fever from the steamship *Monterey*, under treatment at Las Animas Hospital for the past 2 weeks, was discharged recovered October 31.

The city health department reports 12,352 house-inspections, with 65 deposits of water containing mosquito larvæ. Of these collections, 44 contained larvæ of the *Stegomyia calopus*.¹

Report from Matanzas—Inspection of vessels—Summary, October, 1908.

Acting Assistant Surgeon Nuñez reports, November 2:

Week ended October 31. Bills of health granted to 3 vessels clearing for United States ports in good sanitary condition. No quarantinable diseases reported in this district.

Summary, October, 1908.—During the month of October, 1908, bills of health were issued to 12 vessels leaving for United States ports, having an aggregate number of 375 members of crews, and 20 passengers in transit for several Cuban ports; 2 vessels clearing for Southern ports in the United States direct were fumigated; and 14 certificates of non-exposure to yellow fever infection granted to passengers destined for the United States via Habana. No quarantinable diseases reported within this province during the month.

The total number of deaths from all causes during the month was 62, which corresponds to an annual rate of mortality of 20.94 per mille.

Report from Santiago—Inspection of vessels.

Acting Assistant Surgeon Infante reports, October 26:

Week ended October 24. Bills of health issued to 3 vessels bound for the United States. No vessel was fumigated.

No quarantinable disease reported during this week.

GERMANY.

Report from Berlin—Status of cholera in Russia.

The following is received from Consul-General Thackara, under date of October 27:

The total number of cases of cholera registered in the Russian Empire during the week ended October 10 was 2,210, with 1,082 deaths, according to the latest bulletin published by the imperial health office in this city. Since the outbreak of the present epidemic in Russia, the total number of cases of cholera recorded in the Empire up to October 10 was 22,295, with 10,252 deaths.

GREAT BRITAIN.

Plague at Liverpool; imported.

The following is received from the Department of State under date of November 10:

American consul at Liverpool, England, reports the occurrence of 3 cases of plague, 2 fatal; all from same vessel. All precautions taken.

HAWAII.

Reports from Honolulu—Case of leprosy on steamship China from oriental ports.

Chief Quarantine Officer Cofer reports, October 10:

A steerage passenger, nativity Germany, suffering from leprosy, was removed from the steamship *China*, arriving here from oriental ports on October 16.

Examination of rats at Honolulu for plague infection.

Passed Assistant Surgeon Currie, Plague Laboratory, reports, October 10, through Chief Quarantine Officer Cofer:

Week ended October 10.

Rats taken in Honolulu.....	1, 116
Trapped.....	650
Found dead.....	1
Shot from trees.....	465
Examined bacteriologically.....	936
Showing plague infection.....	0

Smallpox in Naples.—During the week ended October 18, 3 cases of smallpox were reported in the city of Naples. One of these was discovered at the examination of steerage passengers previous to embar-

kation, October 16. The patient was sent to the Cotugno hospital for contagious diseases. The lodging house at which the patient had been located was ordered by the provincial physician to be disinfected, and the other occupants and those of the adjoining houses to be vaccinated. These measures were promptly carried out.

Smallpox in Italy,

Week ended October 11. Cases: Castelfranco (Bologna), 2; Palombara (Rome), 9; Naples, 3; Foggia, 13; Montemilone, 1; Genzano (Potenza), 1; Carida, 1; Maropati, 2; Radueno, 3; Giffone (Reggio Calabria), 1; Palermo, 2.

Week ended October 18. Cases: Naples, 3; San Giovanni a Teduccio, 1; Ponticelli, 1; Melito (Naples), 1; Marsico Nuovo (Potenza), 1; Albidona (Cosenza), 5; Carida, 1; Cinquefrondi, 1; Giffone, 2; Tatri-noli, 1; Maropati (Reggio Calabria), 3.

JAPAN.

Report from Kobe—Inspection of vessels—Examination of emigrants.

Acting Assistant Surgeon Slade reports, October 14.

During the week ended October 10, supplemental bills of health were granted to 4 steamships.

One hundred and eleven members of crews and 210 steerage passengers were inspected. Thirty-one steerage passengers were bathed and disinfected. Their effects were disinfected by steam. The number of pieces of baggage steamed was 74 and of bedding 60. Manifests were viséed for 93,583 pieces of freight, amounting to 8,074 tons.

Emigrants were examined as follows: Steamship *Tosa Maru* for Seattle, passed 14, recommended for rejection, 8; steamship *Manchuria* for Honolulu, passed 12, recommended for rejection, 5. The emigrants passed, together with 5 intending passengers to Victoria by the steamship *Tosa Maru*, were inspected, bathed, and disinfected. Their effects were disinfected before embarkation.

Report from Nagasaki—Status of cholera at Moji and Wakamatsu.

Consul Scidmore reports, September 28:

At Moji, from September 2 to 26, there were 51 cases of cholera with 31 deaths reported.

At Wakamatsu conditions are improved and no new cases of cholera have appeared since September 15, when there were reported 6 cases and 3 deaths. The disease made its first appearance at Wakamatsu August 25.

MEXICO.

Report from Mexico City—Further relative to outbreak of typhus fever.

The following information is received from the American embassy, through the Department of State, under date of November 6:

October 25. During the past week 25 cases of typhus fever were registered in the Federal District. In addition to these, 50 cases were registered in Belem prison. During the preceding week a total of 171

cases was registered, with 75 new cases. The entire force of sanitary inspectors is at work in all portions of the Federal District to prevent the spread of the disease.

Report from Progreso—Inspection and fumigation of vessels—Yellow fever at Merida—Sanitary conditions.

Acting Assistant Surgeon Harrison reports, October 24:

Period from October 16 to 24: Four steamships received bills of health; one was fumigated. The members of crews numbered 202; passengers from this port, 40.

Several new cases of yellow fever have occurred in Merida, of which cases 2 were in the lazaretto of the hospital and one in a private residence. All the cases originated in or near Merida. The number of foci in the city is 11 or 12. There is a large swamp on the south side of Progreso and extending the whole length of the town. Owing to the frequent and heavy rains of the past several months the swamp is flooded with water that is fresh in many places and only slightly brackish in others.

Report from Tampico—Inspection of vessels.

Acting Assistant Surgeon Stowe reports, October 28:

Week ended October 27.

Vessels inspected and passed.....	3
Bills of health issued.....	3
Members of crews of outgoing vessels inspected.....	92
Passengers of outgoing vessels inspected.....	19

No cases of quarantinable disease were reported during the week.

NICARAGUA.

Report from Bluefields, fruit port—Few Stegomyia calopus present.

Acting Assistant Surgeon Layton reports:

Ten days ended October 31. Present officially estimated population, 2,500. General sanitary condition of this port and the surrounding country during the week, good. Mosquitoes are more numerous; *Stegomyia calopus* are still very scarce.

Bills of health were issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
Oct. 23	Dictator.....	New Orleans, La.	19	7	0
30	Imperator.....	New Orleans, La., via Cape Gra- cias, Nicaragua.	20	13	0

Temperatures of crews and passengers of above-named vessels taken prior to departure; all normal.

PANAMA.

Reports from Bocas del Toro, fruit port.

Acting Assistant Surgeon Osterhout reports:

Week ended October 20. Present officially estimated population, 4,954. General sanitary condition of this port and the surrounding country during the week, good.

Bills of health issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
Oct. 15	Oracabessa	New Orleans	45	3	0	0
16	Origen	Mobile via Colon	25	3	0	0
17	Fort Gaines	Mobile	22	3	0	0
19	Origen	do	25	0	0	0

Week ended October 27. Present officially estimated population, 4,954. General sanitary condition of this port and the surrounding country during the week, good.

Bills of health issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.

PHILIPPINE ISLANDS.

Reports from Manila—Cholera in Manila and the provinces—Cholera on transport Sheridan—Cholera carriers—Inspection of vessels—Quarantine transactions, month of August, 1908.

Chief Quarantine Officer McClintic reports, September 22: Week ended September 19. One hundred and forty-four cases of cholera, with 96 deaths, and 2 cases of smallpox, with 4 deaths, occurred at Manila.

During the past few weeks cholera in Manila has shown a continued increase. The past 5 weeks show cases as follows: 3, 20, 22, 34, 144, a total of 223 cases and 164 deaths for the 5 weeks. The bureau of health is making a determined effort to check the progress of the epidemic. Chemical fire engines are being used as disinfecting machines, and street-sprinkling wagons are supplying disinfectants to the disinfecting parties. A house-to-house inspection is maintained, a much larger number of suspects are being treated, and a larger number of those sick with cholera at home are now being reported. Cases continue to occur in Bilibid prison, the insular penitentiary.

Interest in the cholera situation has been augmented by the finding of human "vibrio carriers." Six or 7 prisoners in the Bilibid prison and about 20 other persons have been found to harbor in their alimentary canal a large number of cholera-like organisms without any apparent ill effects to the host, although a number of cases have been traced and found to have been associated with these carriers before they were taken with the disease. These carriers have been found through the policy instituted by the bureau of health in having, whenever practicable, the stools of contacts, or those who are living in dwellings in which cases of cholera have developed, examined bacteriologically for the cholera vibrio.

In the ponds and pools of water around Manila many varieties of organisms can be found which morphologically resemble the cholera vibrio, but their relation to the organism that actually produces cholera has not been demonstrated. This, in a measure, is true of the cholera-like organisms found in the so-called cholera-vibrio carriers, but the evidence is rather conclusive that they play a significant rôle in the etiology and spread of the disease. It is a well-known fact that even when kept under the most favorable artificial conditions in the laboratory the cholera vibrio is a frail organism, easily killed by strong sunlight, and that it soon loses its pathogenicity for the lower animals. These well-known characteristics of the organism have been barriers in the way of explaining why cholera has been, for the past few years, at least, endemic in the Philippine Islands, and how, after a period of quiescence, it springs up simultaneously in a virulent and epidemic form in localities remotely situated. Therefore the finding of these vibrio carriers sheds much light upon this complex question, and, furthermore, enlarges the scope of work devolving upon sanitarians in the suppression of a cholera epidemic.

The shipping has been remarkably free from the disease, no cases having occurred on any interisland vessels.

The transport *Sheridan*, while being disinfected at the Mariveles quarantine station, September 14, 1908, prior to sailing for San Francisco, had a case of cholera on board in the person of a second-cabin passenger. The vessel was disinfected, and the crew and passengers were bathed and their effects were disinfected. September 16 a second case developed in an American member of the crew. The contacts were redisinfecting. The second case died in the Mariveles hospital at midnight of September 16. All were held in quarantine under observation until September 21, when the vessel was granted a bill of health for San Francisco, Nagasaki, and Honolulu, no further cases having occurred. The first case is recovering.

Owing to the increase of cholera in the city of Manila, and in order to protect as much as possible the noninfected provinces, vessels leaving Manila, with certain exceptions, were required, from September 18, 1908, to call at Mariveles for inspection or detention.

The progress of the cholera epidemic in the provinces has been greatly lessened during the past few weeks, except in Iloilo and adjacent provinces. The number of cases to date in the provinces is 18,698, with 11,965 deaths.

The following is an unofficial list of the cases and deaths from cholera in the provinces of the Philippine Islands for the week:

Provinces.	Cases.	Deaths.
Rizal	97	71
Bulacan	33	32
Ilocos Sur	40	15
Pampanga	8	5
Tarlac	3	2
Pangasinan	7	2
Union	25	17
Iloilo	779	480
Total	992	624

During the week consular bills of health were issued at the port of Manila to 2 steamships.

Quarantine transactions of the service in the Philippine Islands during the month of August, 1908.

RUSSIA.

Report from Libau—Measures to prevent cholera infection among emigrants—Status of cholera in Russia.

September 26 Acting Assistant Surgeon De Forrest was directed by the bureau to proceed to Libau with instructions to report on the progress of cholera in Russia and furnish information relative to the restrictive measures enforced by the Russian Government and the representatives of the United States at the ports of departure of emigrants from Russia. He reports, October 15, 24, and 26:

The cholera-infected districts of Russia, with the exception of St. Petersburg, are distant from Libau 4 or 6 days' journey by rail. Upon arrival at Libau intending emigrants are quartered in barracks furnished by the Russian East Asiatic Steamship Company. I have personally examined these barracks and have found them clean and well kept. Here the emigrants are detained in close quarantine for a period of 5 days. At the expiration of this period of detention, if the conditions are satisfactory, they are allowed to go into the city and are lodged in various places. If any case of sickness (vomiting, diarrhea, etc.) occurs, it is promptly reported to the police officials and city physician and is carefully examined and kept under close observation. Cultures are made if the case is suspicious. No cultures have been necessary from emigrants I have examined, all having been in good condition. The 5 days' detention in quarantine is not required to be the 5 days preceding the sailing of the vessel on which the emigrants embark. The police system in force in Libau requires all cases of sickness to be reported by landlords. Before embarking the emigrants are examined by physicians employed by the steamship company previous to being taken on board. Daily inspection of the emigrants at their scattered lodging houses being impracticable I will in future personally examine each emigrant 5 days before the vessel sails and again before embarkation, giving each a certificate of examination. I will also see that the baggage is disinfected previous to being taken on board. The voyage from Libau to

the United States takes from 17 to 18 days. A steam disinfection station for the disinfection of baggage is to be established by the steamship company. It is expected to be in operation in the spring of 1909.

The last appearance of cholera in Libau was in 1892. It occurred in a family all the members of which were attacked by the disease. There were no further cases. In case of a cholera outbreak emigration would be suspended by the police until the city was declared free of infection. The water supply of Libau is from artesian wells 200 or more feet deep.

Examination of emigrants.—From October 19 to 23 I examined at their various lodging places 777 emigrants. October 23 I inspected the steamship *Korea*, the next vessel sailing after that date for New York, and examined the crew and officers, 85 in all. October 24, reexamined crew of *Korea* and supervised disinfection of baggage. The vessel sails October 27. October 24, 44 emigrants from Saratov applied for permission to sail on the steamship *Korea* but were refused, Saratov being considered still cholera-infected. In addition to this number 60 others who arrived at Libau from Saratov on the evening of October 24 were refused permission. They will be detained 3 weeks at Libau, until the sailing of the next vessel. Some of the emigrants per steamship *Korea* have been in Libau from 3 weeks to 3 months and many live at Libau. Of the emigrants examined 130 were rejected for trachoma, 5 for favus, and 1 each for measles and whooping cough. The crew and all passengers will be examined by me before they board the vessel, each receiving certificate of 3 days' stay in Libau previous to sailing.

Status of cholera.—Cholera is decreasing in Russia. At St. Petersburg from October 17 to 24, 328 cases with 108 deaths, and at Riga 36 cases with 17 deaths were reported. The total of new cases at St. Petersburg during the week was 326 with 106 deaths, and at Riga 33 new cases with 16 deaths. The Moscow press of October 26 gives the following:

October 23. Faustova, 5 cases; Archangel, 6 cases, 4 deaths; Archangel district, 2 deaths; Ekaterinslav, total of 26 cases; Kief, total of 26 cases; Jaroslav, 2 cases present, 328 cases since outbreak, with 160 deaths; Novo-Nikolajewsk, 7 cases, 3 deaths; Tiflis, 1 new case, 1 death.

October 21. Moscow government, 12 new cases, 6 deaths.

October 24. St. Petersburg, 21 new cases, 12 deaths.

Conditions at St. Petersburg.—The situation of St. Petersburg is favorable to the development of cholera, the city being built on made ground and surrounded by a network of stagnant canals. The water in the canals is frequently drunk by the poorer classes. All the schools in St. Petersburg are closed and the school buildings used as hospitals.

Conditions at Saratov.—The city of Saratov, which is situated on the Volga River, is the center of the cholera district. Many of the people live on the dead and putrid fish which they are unable to sell, sleep out of doors on the damp ground, and drink river water.

ST. LUCIA ISLAND.

Report from Castries—Sanitary conditions.

Acting Assistant Surgeon Maylie reports, October 12 and 19:

Two weeks ended October 17. Sanitary condition of this port and vicinity good. No quarantinable diseases exist.

VENEZUELA.

Report from Caracas—Plague in the city and vicinity.

The following information is received, October 18, through the Department of State, from Mr. John Brewer, in charge of the archives of the legation:

Bubonic plague has made its appearance in one of the suburbs of Caracas, 3 patients having been removed to the city quarantine hospital in the past 2 weeks. One new case of the disease was reported in Caracas during the same period.

FOREIGN AND INSULAR STATISTICAL REPORTS OF COUNTRIES AND CITIES—UNTABULATED.

BORNEO—*Sandakan*.—Month of August, 1908. Estimated population, 10,495. Total number of deaths, 18, including beriberi 2, tuberculosis 1, and 6 from enteric fever.

CANADA—*Ontario—Hamilton*.—Month of October, 1908. Estimated population, 63,256. Total number of deaths, 62, including enteric fever 3, scarlet fever 1, and 6 from tuberculosis.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 76 great towns in England and Wales during the week ended October 17, 1908, correspond to an annual rate of 12.9 per 1,000 population, which is estimated at 16,234,952.

London.—One thousand and ninety-two deaths were registered during the week, including measles 13, scarlet fever 4, diphtheria 11, enteric fever 11, whooping cough 2, tuberculosis 120, and 71 from diarrhea. The deaths from all causes correspond to an annual rate of 11.9 per 1,000. In Greater London 1,591 deaths were registered. In the "outer ring" the deaths included 3 from measles, 13 from diphtheria, 3 from whooping cough, and 25 from diarrhea.

Salford.—Week ended October 17, 1908. Estimated population, 239,294. Total number of deaths, 67, including scarlet fever 1, diphtheria 1, whooping cough 1, enteric fever 1, and 8 from diarrhea.

Ireland.—The average annual death rate represented by the deaths registered during the week ended October 17, 1908, in the 21 principal town districts of Ireland was 15.7 per 1,000 of the population, which is estimated at 1,131,959. The lowest rate was recorded in Ballymena, viz, 4.8, and the highest in Portadown, viz, 25.8 per 1,000.

Scotland.—The deaths registered in 8 principal towns during the week ended October 10, 1908, correspond to an annual rate of 12.4 per 1,000 of the population, which is estimated at 1,839,038. The highest rate of mortality was recorded in Paisley, viz, 14.4, and the lowest in Perth, viz, 7.4 per 1,000. The aggregate number of deaths registered from all causes was 436, including diphtheria 3, measles 2, scarlet fever 2, whooping cough 17, and 33 from diarrhea.

Pernambuco.—Two weeks ended September 15, 1908. Estimated population, 210,000. Total number of deaths, 315, including yellow fever 1, smallpox 45, enteric fever 1, measles 1, and 46 from tuberculosis.

SPAIN—Almeria.—Month of September, 1908. Estimated population, 50,000. Total number of deaths, 108, including enteric fever 2, whooping cough 1, and 12 from tuberculosis.

Huelva.—Month of September, 1908. Estimated population, 24,000. Total number of deaths, 65, including typhus fever 2, measles 1, and 5 from tuberculosis.

TASMANIA—Hobart.—Month of August, 1908. Estimated population, 184,008. Total number of deaths, 208, including enteric fever 5, diphtheria 2, and 2 from whooping cough.

TURKEY—Smyrna.—Three months ended October 6, 1908. Estimated population, 400,000. Total number of deaths, 943, including yellow fever 1, enteric fever 38, smallpox 15, measles 2, scarlet fever 2, and 176 from tuberculosis.

Cholera, yellow fever, plague, and smallpox, from June 27 to November 13, 1908.

[Reports received by the Surgeon-General, Public Health and Marine-Hospital Service, from American consuls, through the Department of State, and from other sources.]

[For reports received from December 27, 1907, to June 26, 1908, see PUBLIC HEALTH REPORTS for June 26, 1908.]

[NOTE.—In accordance with custom, the tables of epidemic diseases are terminated semiannually and new tables begun.]
